## 3D design of cylindrical solar container lithium battery

How to model a cylindrical lithium ion battery in 3D?

Thermal Modeling of a Cylindrical Lithium-Ion Battery in 3D This example simulates the heat profile in an air-cooled cylindrical battery in 3d. The battery is placed in a matrix in a battery pack. The thermal model is coupled to a 1d-battery model that is used to generate a heat source in the active battery material.

What is a thermal model of a battery?

The battery is placed in a matrix in a battery pack. The thermal model is coupled to a 1d-battery model that is used to generate a heat source in the active battery material. The model requires the Batteries & Fuel Cells Module and the Heat Transfer Module however, additional products may be required to completely define and model it.

What is a lithium ion battery?

Lithium-ion battery cells are composed of structural constituents spanning over multiple length scales. Figure 1a shows a typical cylindrical LiB scanned by X-ray micro-computed tomography (micro-CT) at a voxel size of 12.9 um, with a corner-cut-out showing the auxiliary components in the cell cap and the internal structure of the cell.

Which products are required to model a battery & fuel cell model?

The model requires the Batteries & Fuel Cells Module and the Heat Transfer Module however, additional products may be required to completely define and model it. Furthermore, this example may also be defined and modeled using components from the following product combinations:
