Why is air cooling a problem in energy storage systems?

Conferences > 2022 4th International Confer... With the energy density increase of energy storage systems (ESSs), air cooling, as a traditional cooling method, lags along due to low efficiency in heat dissipation and inability in maintaining cell temperature consistency. Liquid cooling is coming downstage.

Why does air cooling lag along in energy storage systems?

Abstract: With the energy density increase of energy storage systems (ESSs), air cooling, as a traditional cooling method, lags along due to low efficiency in heat dissipation and inability in maintaining cell temperature consistency. Liquid cooling is coming downstage.

Which CFD is used for meshing in ANSYS ICEM ESS?

The ANSYS ICEM CFD is used for meshing in this study. Fig. 7 displays the employed mesh of the LIB modules and liquid cooling system in the ESS. Because full-size LIB ESS is too large to perform grid independence test, a single LFP battery module and the cooling plates attached to it are selected.

Does ambient temperature affect the heat dissipation of lib modules?

The cooling plates only contact with the bottom of the NCM battery modules and the left and right sides of the LFP battery modules, the other surfaces of the battery module, for heat dissipation, rely on convection heat exchange with air. In the actual operation, the ambient temperature in LIB ESS may affect the heat dissipation of the LIB modules.
