
Container generator set installation in Iceland

What is a containerized generator set?

() On a regular basis, containerized generator sets (CGS) are placed onboard ships to provide replacement power in case of damage to one of the ship's generator sets, or additional power, e.g. to provide power to extra deck equipment or reefer containers.

What is a containerised generator?

Our Containerised Generators deliver robust, high-capacity power from 300-3,000 kVA in secure, weather-resistant enclosures. Designed for challenging environments and critical applications, they offer noise reduction, easy transport, and bespoke configuration to meet your site's exact needs.

Which genset containers are available?

All genset containers are also available with an option for -40°C and most variants can be upgraded for +45°C. A broad range of options, both mechanical and electrical, are available to ensure that our containers meet the project requirements. For example, we offer several heat recovery configurations and exhaust after treatment systems.

What size generator container do I need?

Our generator containers for Type 2, 3, and 4 gas engines have a standard 40-foot length. Width and height depend on engine type, the application (power generation only or CHP) and ambient conditions. Customized sizes to accommodate special project requirements are available on request.

Emergency power station in Iceland composed of 3 generators of 1250 kVA each in medium voltage 11kV operating in parallel, each in its own 20-foot container. We are building ...
