Do inverters and batteries need to match?

The inverter and batteries must match in terms of voltage, capacity, and power output. If you are using a 12V battery, then the input voltage of the inverter must match the battery voltage. If the specifications of the battery and the inverter do not match, the system will not operate stably and may even damage the equipment.

Why do you need a battery connection for an inverter?

The DC comes from the batteries which are used to power the inverter, and this inverter transforms the power into AC usable by bulbs, fans, and other small electrical devices. You must go through battery connection for inverter while considering the risks of electrical shocks, damage to devices, so that potential fire risks are avoided.
