What is an explosion-proof cabinet?

An explosion-proof cabinet is a type of cabinet that adopts a double-layer steel structure and undergoes various treatments such as pickling, phosphating, and epoxy resin electrostatic spraying. It can burn for 2 hours at a temperature over 1,000 degrees without the internal temperature exceeding 200 degrees.

What is a battery safety cabinet?

Additionally, these safety cabinets are equipped with anti-static devices to prevent battery damage or accidents caused by static electricity. With the rapid development of the new energy industry, the application of batteries in energy storage is also becoming more extensive.

Are battery charging cabinets fireproof?

Modern lithium batteries are prone to overheating and even catching fire due to overcharging, unstable currents, or other reasons during charging. Battery charging safety cabinets, with their fireproof and explosion-proof designs, effectively prevent these accidents.
