
How big an inverter should I use for outdoor camping

Do I need an inverter size chart?

The need for an inverter size chart first became apparent when researching our DIY solar generator build. Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly.

What are the different solar inverter sizes?

Solar generators range in size from small generators for short camping trips to large off-grid power systems for a boat or house. Consequently, inverter sizes vary greatly. During our research, we discovered that most inverters range in size from 300 watts up to over 3000 watts. In this article, we guide you through the different inverter sizes.

Why should you choose a large inverter?

Large inverters consume extra power even while idle, increasing your battery drain. For example, using a 3000w inverter to power only small items like laptop chargers or games consoles, regularly wastes precious battery capacity and can reduce the lifespan of your battery bank. The ideal inverter size matches your real-world usage.

Should you choose a larger inverter for a campervan?

Being realistic about inverter limits ensures a safe, efficient campervan electrical system. Appliances like induction hobs, microwaves, and refrigerators briefly use more power when first switching on. Some people assume this means selecting a significantly larger inverter, but that's often unnecessary.

What Size Inverter is Good for a Camper For general purposes such as lighting, charging devices, and operating small appliances, an inverter with a capacity of 1000 to 1500 ...
