# How to turn off the power of the base station generator

How do you turn a generator back on?

When it's time to get your generator ready again, follow these steps to power it back on and set it to automatic mode: Flip the main utility disconnect back on if you turned it off earlier. Switch the generator from "OFF" to "AUTO." Let the unit enter standby mode. This tells the system to wait and activate automatically when the power goes out.

How do you turn off a generator?

Turn off the generator Once all appliances and devices are turned off, turn off the generator by moving the switch or lever to the "off" position. This will stop the engine and the generator from producing power. Let the generator cool down After turning off the generator, let it cool down for at least 10 minutes.

How do I Turn Off my Generac generator?

Here's a step-by-step guide to turning off your Generac generator safely: Go to the generator's control panel. You'll usually find this mounted on the side of the unit. Set the toggle switch or keypad to "OFF." Wait for the engine to fully shut down. Give it a few seconds to power off.

How do you stop a generator from producing power?

This will stop the engine and the generator from producing power. Let the generator cool down After turning off the generator, let it cool down for at least 10 minutes. This will help prevent damage to the internal components, and also make it safer to handle.
