# Hybrid energy storage device for wind farms

Can a hybrid energy storage system smooth wind power output?

This article proposes a hybrid energy storage system (HESS) using lithium-ion batteries (LIB) and vanadium redox flow batteries (VRFB) to effectively smooth wind power output through capacity optimization. First, a coordinated operation framework is developed based on the characteristics of both energy storage types.

Can wind power be integrated into a wind-hybrid energy storage system?

Achieving grid-smooth integration of wind power within a wind-hybrid energy storage system relies on the joint efforts of wind farms and storage devices in regulating peak loads. For this study, we conducted simulations and modeling encompassing different storage state systems and their capacity allocation processes.
