# Icelandic solar energy storage power supply price

How much does a battery cost in Iceland?

As of 2025, the average price for lithium-ion battery systems in Iceland hovers around \$150-\$200 per kWh. That's 10-15% higher than EU averages, thanks to those pesky import fees. But here's the kicker: Iceland's unique energy profile means batteries aren't just for grid backup.

Is Iceland's energy supply good?

Iceland's energy supply is very cost-competitive due to its almost 100% carbon-free electricity generation and high potential of natural energy resources.

How does Iceland get its electricity?

This significant achievement is primarily supported by hydropower, contributing more than two-thirds of the total electricity supply from the turquoise waters flowing through the nation's rivers and waterfalls. The remaining close to a third comes from geothermal energy, harnessing the Earth's heat beneath Iceland's volcanic landscape.

How much electricity does Iceland use per person?

Despite its achievements in clean energy, Iceland has seen a downward trend in electricity consumption per person over recent years. As of 2025, electricity consumption stood at around 46,963 kWh per person, marking a significant reduction of nearly 9,845 kWh from the peak consumption level recorded in 2015.

Are battery and energy storage supply chain disruptions causing global disruptions? Battery and energy storage global supply chain disruptions hit an all-time high in the first quarter of 2022. ...
