# Production of portable power supply

Who makes portable power units?

Japanese and Korean companies are the most involved in portable power units for electronic devices, and have recently launched a series of products that are mainly based on direct methanol-fuelled PEFC; large-scale commercialization of these devices is planned in the coming years.

Can a supercapacitor be used as a rechargeable power source?

For moderate energy demands in portable electronics, supercapacitors are suitable as rechargeable stand-alone power sources. In conjunction with rechargeable batteries in uninterruptible power supplies, supercapacitors can handle short interruptions and can extend battery life.

Can methanol fuel cells be used as a power supply?

Mainly fuel cells operating on methanol are currently tested for the purpose of man-portable power supply by the different armies. The French and US armies, however, are also considering hydrogen-fed proton-exchange membrane fuel cell (PEMFC) systems.

How much electricity does a laptop use?

This distinction is useful because smaller personal devices - such as cameras and mobile phones - tend to draw about 3 W, while laptops and other large electronics devices can use up to 50 W. Other criteria are also available in the literature.

The portable outdoor power supply capacity is defined as between 80Wh and 5000Wh, with a power range of 80W to 3000W. Provide power supply for various electrical equipment, ...
