Does Romania have a solar PV project in 2023?

Overview of solar PV developments Following a period of lull,Romania has achieved in 2023 a significant milestone in its renewable energy journey - over 1 GWof new solar capacity installed in one year between distributed generation and utility scale projects.

What is the future of PV in Romania?

The Romanian PV market has entered a new boom phase,driven by the current security context,the imperative of green transition,and the favorable permitting framework. As the country moves towards decarbonization and the large-scale adoption of clean technologies,the outlook for the future of PV points to sustained development.

What drives the growth in the Romanian PV sector?

While this annual figure represents a significant quantitative leap relative to the capacity deployed in past years,which averaged 1 MW,the main driver of the impressive developments in the Romanian PV sector is the distributed generation segment.

Is Romania a good country for solar energy?

National targets for solar PV With an average of 1,900 to 2,400 annual sunlight hours,Romania has significant natural potentialfor solar PV development. Yet,the country has not set ambitious targets for renewable energy sources,aiming for only 30.7% of its final energy consumption to come from RES by 2030.
