
Solar energy storage equipment requirements

What are the metering requirements for solar+storage systems?

pt from these restrictions. **METERING REQUIREMENTS:** For solar+storage systems designed to participate in net energy metering or other programs where utility bill credits are earned for solar energy produced or exported to the grid, additional meters may be required by the utility to track and verify that only solar energy

How should solar energy capacity be sized?

rating of the solar system. Energy capacity should be sized based on the economics of storing energy versus the cost of additional storage capacity, i.e., the value of additional solar kilowatt-hours directly consumed over the life of the storage system versus the upfront cost of purchasing additional battery system kilowatt-hours. Storage s

Should a solar system have a battery storage system?

e a battery storage system. The best-case scenario is when a solar system is already designed with storage in mind, known as a storage-ready solar system. In these systems, it should be an easy, almost plug-and-play process to add storage (more on making a solar
