
Solar panels on rural roofs in Denmark

How do we use solar energy in Denmark?

Today, we use solar energy in Denmark in two ways: in the form of rooftop solar panels that can produce heat and district heating, and solar cells that can produce electricity. Why is solar energy important?

Will Denmark have more solar cells?

Today, researchers are working on setting up more solar cells in Denmark and finding the right combination with other renewable energy sources while using the energy smartly. According to the Danish Energy Agency's 2020 Baseline Projection (Danish only), solar cells will account for around 15% of Denmark's electricity production by 2030.

Why is solar heating important in Denmark?

Solar heating covers approx. 2% of Denmark's district heating production. One of the big challenges of solar heating is energy storage, because the sun provides the most energy in the summer, when we need it the least to heat buildings. Heat storage is therefore a major research area at DTU.

How many solar heating plants are there in Denmark?

At the end of 2017, there were 296 solar heating plants (solar heating plants with solar panel areas over 500 square metres) in operation worldwide, 111 of which were located in Denmark. Read also: Denmark at global front within solar heating. Solar heating covers approx. 2% of Denmark's district heating production.

Denmark's largest energy community is now under construction, featuring more than 30,000 sqm of solar rooftops with a total capacity of about 4 MW. The project will use ...

Grid stability: With proper integration, solar systems can contribute to a more stable and resilient energy grid. Economic benefits: The solar industry creates jobs and stimulates local ...

The profitability of installing solar panels continues to fuel this market-driven expansion, making it easier for businesses and individuals to invest in solar energy in Denmark.
