# Standard dimensions of solar panels for factories

What are the dimensions of standard solar panels?

Most solar panels are about 1.5 inches thick. The typical classification of solar panel sizes is based on the solar cell size, but it's not very useful for most calculations.

How big should a commercial solar panel be?

For commercial solar panel installations, panels often range from 400W to 600W, with dimensions of approximately 195 x 99 x 3.81 cm (6.40 x 3.25 x 0.13 feet). Several factors affect the size of a solar panel, including the type of solar cells used, the desired wattage output, your property's size and the panel's overall efficiency.

How big are industrial solar panels?

Industrial panels are significantly larger than common solar panel sizes used in residential settings. Residential panels typically measure around 65 inches by 39 inches, with 60 cells, producing between 250 to 300 watts.
