# Uninterruptible power supply not running

What is an uninterruptible power supply (UPS) system?

Uninterruptible Power Supply (UPS) systems are essential for ensuring that critical devices remain powered during power outages. However, like any other technology, UPS systems can experience issues that may affect their performance and reliability.

Can an old power supply cause an ups to fail?

Ageing Power Supplies If your system regularly overheats, an ageing power supply can cause your UPS to fail. But troubleshooting an outdated power supply isn't as simple as other UPS problems. You need someone on call 24/7 to get you back up and running as quickly as possible.

Why is my ups not working after a power outage?

What it is: When you notice that your UPS isn't working after a power outage, the first troubleshooting step you should take is to check its incoming power supply. Remember: the UPS will drain its battery during a power outage. If the outage goes on for too long, the UPS will lose all its power and must recharge when power is restored.
